Explanation for model GT-43007-***:

The 1st "*" part denotes the rated output wattage designation, which can be "01" to "40", with interval of 1.

The 2nd "*" part denotes the standard rated output voltage designation, which can be "12", "24", "36" and "48". Each standard rated output voltage designation corresponds to a transformer model. Each transformer model is identical in insulation construction including clearance and creepage except number of turns per coil.

The 3rd "*" part is optional, which can be "-0.1" to "-11.9" with interval of 0.1 to denote voltage deviation or blank to indicate no voltage different. The result by subtracting the deviation value from the standard rated output voltage denotes the rated output voltage, with a range of 12-48 volts.

Model list

Model	Rated output voltage range	Max. rated output current	Max. rated output power	Transformer designation
