### 2.0 Product Description

| Product | Medical Power Supply |
| :---: | :---: |
| Brand name | GlobTek |
| Description | Product covered by this report is medical power supply module. <br> Desktop power supplies are provided with suitable external enclosure. The top and bottom parts of the enclosure are ultrasonic welded. <br> Open frame power supplies are without external enclosure. The external enclosure will be provided within the end product. <br> The products were tested to be suitable for connection to $\leq 16 \mathrm{~A}$ (IEC) and $\leq 20 \mathrm{~A}$ (USA) branch circuit in series. The unit is approved for TN mains star connections. The unit provides internally two fuses. <br> The power supplies are rated class I or class II or class II units may have an optional functional earth connection. Open frame and encapsulated class I power supplies shall be properly bonded to the main protective bonding termination in the end product. <br> All the types are designed for continuous operation. |
| Models | GT followed by M, - or H; followed by 91099-; followed by 01 to 60; followed by 09, 15, 24 or 48; may be followed by -0.01 to -23.9; followed by -T2, -T2A, -T3, -T3A, -T2L, -T2AL, T3L, T3AL, -R2, -R3A, -F, -FW, -P2 or -P3; may be followed by six characters. <br> GT followed by M, - or H; followed by 96600-; followed by 01 to 60 ; followed by 05 to 54 or 5.0 to 54.0; followed by -T2, -T2A, -T3, -T3A, -T2L, -T2AL, T3L, -T3AL, -R2, -R3A, -F, -FW, -P2 or P3; may be followed by six characters. |
| Model Similarity | All the models have similar construction of PCB but the rating input and output are different. |
| Ratings | 96600 series, output $5-54 \mathrm{Vdc}$, Max 8A, 60W 91099 series, output $5-48 \mathrm{Vdc}$, Max 6A, 60W |
| Other Ratings | N/A |
| Conditions of Acceptability | The products covered in this Report are incomplete in construction features or limited in performance capabilities and are intended for use and evaluation in other products. Consideration should be given to the following when the component is used in or with another product. <br> 1.Scope of Power Supply evaluation defers the following clauses to be determined as part of the end product investigation: <br> a) Clause 7.9 (Accompanying Documents of power adapter model are provided for some critical issue like technical data, safety warnings, necessary information to set up. Further evaluation is needed for both power adapter model and open frame model on end product level.), <br> b) Clause 8.11.5 (Mains Fuse with High Breaking Capacity), <br> c) Clause 9 (ME Hazard), except 9.1 and 9.3 are evaluated, <br> d) Clause 10 (Radiation), <br> e) Clause 11.7 (Biocompatibility), <br> f) Clause 14 (PEMS), <br> g) Clause 16 (ME Systems), <br> h) Clause 17 (EMC) <br> 2. For open frame model <br> - Suitability of the enclosure should be evaluated when installed in the end product including access to energized parts, clearance \& creepage distance measurement and mechanical strength. <br> - Temperature Testing should be performed on this component when installed in the end product. |

| NOTES: <br> 1) Not all item numbers are indicated (called out) in the photos, as their location is obvious. <br> 2) "Various" means any type, from any manufacturer that complies with the "Technical data and securement means" and meets the "Mark(s) of conformity" can be used. <br> 3) Indicates specific marks to be verified, which assures the agreed level of surveillance for the component. "NR" - indicates Unlisted and only visual examination is necessary. "See 5.0" indicates Unlisted components or assemblies to be evaluated periodically refer to section 5.0 for details. |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

### 5.0 Critical Unlisted CEC Components

No Unlisted CEC components are used in this report.

### 6.0 Critical Features

Recognized Component - A component part, which has been previously evaluated by an accredited certification body with restrictions and must be evaluated as part of the basic product considering the restrictions as specified by the Conditions of Acceptability.

Listed Component - A component part, which has been previously Listed or Certified by an accredited Certification Organization with no restrictions and is used in the intended application within its ratings.

Unlisted Component - A part that has not been previously evaluated to the appropriate designated component standard. It may also be a Listed or Recognized component that is being used outside of its evaluated Listing or component recognition.

Critical Features/Components - An essential part, material, subassembly, system, software, or accessory of a product that has a direct bearing on the product's conformance to applicable requirements of the product standard.
Construction Details - For specific construction details, reference should be made to the photographs and descriptions. All dimensions are approximate unless specified as exact or within a tolerance. In addition to the specific construction details described in this Report, the following general requirements also apply.

1. Spacing - See insulation diagram in section 7.0
2. Mechanical Assembly - Components such as switches, fuseholders, connectors, wiring terminals and display lamps are mounted and prevented from shifting or rotating by the use of lockwashers, starwashers, or other mounting format that prevents turning of the component.
3. Corrosion Protection - All ferrous metal parts are protected against corrosion by painting, plating or the equivalent.
4. Accessibility of Live Parts - For adapter models, all uninsulated live parts in primary circuitry are housed within a non-metallic enclosure constructed with no openings and metal enclosure earthed with ventilation holes other than those specifically described in Sections 3 and 4.
5. Grounding - All exposed dead-metal parts and all dead-metal parts within the enclosure that are exposed are connected to the grounding lead of the power supply cord and the equipment grounding terminal.
6. Polarized Connection - This product is not provided with a polarized power supply connection.
7. Internal Wiring - Internal wiring is routed away from sharp or moving parts. Internal wiring leads terminating in soldered connections are made mechanically secure prior to soldering. Recognized Component separable (quick disconnect) connectors of the positive detent type, closed loop connectors, or other types specifically described in the text of this report are also acceptable as internal wiring terminals. At points where internal wiring passes through metal walls or partitions, the wiring insulation is protected against abrasion or damage by plastic bushings or grommets. All wiring is minimum 24 AWG , with a minimum rating of $300 \mathrm{~V}, 80^{\circ} \mathrm{C}$.
8. Schematics - Refer to Illustration No(s). 5-8 for schematics \& PCB layout requiring verification during Field Representative Inspection Audits.
9. Markings - Refer to illustrations No(s). 9-10 for details.
10. Installation, Operating and Safety Instructions - Accompanying Documents are provided for some critical issue like technical data, safety warnings, necessary information to set up, but further evaluation is needed on end product level.

### 10.0 General Information

The Applicant and Manufacturer have agreed to produce, test and label ETL Listed products in accordance with the requirements of this Report. The Manufacturer has also agreed to notify Intertek and to request authorization prior to using alternate parts, components or materials.

## COMPONENTS

Components used shall be those itemized in this Intertek report covering the product, including any amendments and/or revisions.

## LISTING MARK

The ETL Listing mark applied to the products shall either be separable in form, such as labels purchased from Intertek, or on a product nameplate or other media only as specifically authorized by Intertek. Use of the mark is subject to the control of Intertek.

The mark must include the following four items:

1) applicable country identifiers "US" and/or "C" or "US", "C" and "EU"
2) the word "Listed" or "Classified" or "Recognized Component" (whichever is appropriate)
3) a control number issue by Intertek
4) a product descriptor that identifies the standards used for certification. Example:

For US standards, the words, "Conforms to" shall appear with the standard number along with the word, "Standard" or "Std." Example: "Conforms to ANSI/UL Std. XX."

For Canadian standards, the words "Certified to CAN/CSA Standard CXX No. XX." shall be used, or abbreviated, "Cert. to CAN/CSA Std. CXX No. XX."

Can be used together when both standards are used.
Note: A facsimile must be submitted to Intertek, Attn: Follow-up Services for approval prior to use.
The facsimile need not have a control number. A control number will be issued after signed Certification
Agreements have been received by the Follow-up Services office, approval of the facsimile of your proposed Listing Mark, satisfactory completion of the Listing Report, and scheduling of a factory assessment in your facility.

## MANUFACTURING AND PRODUCTION TESTS

Manufacturing and Production Tests shall be performed as required in this Report.

## FOLLOW-UP SERVICE

Periodic unannounced audits of the manufacturing facility (and any locations authorized to apply the mark) shall be scheduled by Intertek. An audit report shall be issued after each visit. Special attention will be given to the following:

1. Conformance of the manufactured product to the descriptions in this Report.
2. Conformance of the use of the ETL mark with the requirements of this Report and the Certification Agreement.
3. Manufacturing changes.
4. Performance of specified Manufacturing and Production Tests.

In the event that the Intertek representative identifies non-conformance(s) to any provision of this Report, the Applicant shall take one or more of the following actions:

1. Correct the non-conformance.
2. Remove the ETL Mark from non-conforming product.
3. Contact the issuing product safety evaluation center for instructions.

### 10.1 Evaluation of Unlisted Components

Because Unlisted Components are uncontrolled, and they do not fall under a third party follow up program, Intertek may require these components to be tested and/or evaluated at least once annually, more often for certain components, as part of the independent certification process. The Unlisted Components in Section 5.0 require testing and/or evaluation as indicated.

Note to Intertek Follow Up Inspector: The Component Evaluation Center, CEC, will notify you in writing when these components must be selected and sent to the CEC for re-evaluation

Ship the samples to:
Intertek Testing Services Shanghai Limited
ETL Component Evaluation Center
Building No. 86, 1198 Qinzhou Road (North)
Shanghai 200233, China
Attn: Ms. Dansy Xu
Sample Disposition: Due to the destructive nature of the testing, all samples will be discarded at the conclusion of testing unless, the manufacturer specifically requests the return of the samples. The request for return must accompany the initial component shipment.

### 11.0 Manufacturing and Production Tests

The manufacturer agrees to conduct the following Manufacturing and Production Tests as specified:

## Required Tests

Dielectric Voltage Withstand Test

### 11.1 Dielectric Voltage Withstand Test

## Method

One hundred percent of production of the products covered by this Report shall be subjected to a routine The test shall be conducted on products, which are fully assembled. Prior to applying the test potential, all switches, contactors, relays, etc., should be closed so that all primary circuits are energized by the test potential. $\ddot{\text { The }} \ddot{\text { e test voltage specified below shall be applied between primary circuits and accessible dead-metal parts. The }}$ test voltage may be gradually increased to the specified value but must be maintained at the specified value for one second or one minute as required.

## Test Equipment

The test equipment shall incorporate a transformer with an essentially sinusoidal output, a means to indicate the The test equipment shall incorporate a voltmeter in the output circuit to indicate directly the applied test potential If the rated output of the test equipment is 500VA or more, the applied test potential may be indicated by either: 1 - a voltmeter in the primary circuit;

| Products Requiring Dielectric Voltage Withstand Test: |  |  |
