2.0 Product Description	
Product	ITE/ICT Power Supply
Brand name	 (G GLOBTEK,INC.)
Description	<p>Product covered by this report is power supply module. Desktop power supply is provided with suitable external enclosure, which is Class I or Class II apparatus. Two pieces of outer enclosure are enclosed with ultrasonic welding without screw. The product is not intended to use in the environment which altitude exceed 5000m.</p>
Models	<p>GT followed by -, M or H; followed by 91099; followed by -; followed by 01 to 60; followed by 09, 15, 24 or 48; may be followed by -0.01 to -23.9; followed by -T2, -T2A, -T3 or -T3A; may be followed by six character.</p> <p>GT followed by -, M or H; followed by 96600; followed by -; followed by 01 to 65; followed by 05 to 54; followed by -T2, -T2A, -T3, -T3A, -T2L, -T2AL, -T3L, -T3AL, -R2, -R3A, -TP, -TP3, -TW or -TW3; may be followed by six character.</p> <p>GT followed by -, M or H; followed by 96600; followed by -; followed by 01 to 65; followed by 5.0 to 54.0; followed by -T2, -T2A, -T3, -T3A, -T2L, -T2AL, -T3L, -T3AL, -R2, -R3A, -TP, -TP3, -TW or -TW3; may be followed by six character.</p> <p>GT followed by -, M or H; followed by 96600; followed by -; followed by 01 to 70; followed by 56; followed by -T2, -T2A, -T3 or -T3A; followed by -Ap, -PP or -SP; may be followed by six character.</p>

2.0 Product Description

GT*91099-****

Followed by "M" or "-" or "H" for market identification and not related to safety.

Followed by "01" to "60" denotes the rated output wattage designation, with interval of 1, "01" stands for 1W, "60" stands for 60W.

Followed by "09", "15", "24", or "48" denotes the standard rated output voltage designation;

Followed by "-0.01" to "-23.9" is optional deviation, subtracted from standard output voltage, with interval of 0.01, or blank to indicate no voltage different.

Followed by "-T2" means desktop class II with C8 AC inlet

Followed by "-T2A" means desktop class II with C8 AC inlet

Followed by "-T3" means desktop class I or class II with functional earth with C14 AC inlet

Followed by "-T3A" means desktop class I or class II with functional earth with C6 AC inlet

May be followed by six character which can be "0" to "9", "A" to "Z", "-", "()" or "[]" or blank for marketing purposes and have no bearing on safety or compliance.

GT*96600-****

Followed by "M" or "-" or "H" for market identification and not related to safety.

Followed by "01" to "65" denotes the rated output wattage designation, with interval of 1, "01" stands for 1W, "65" stands for 65W.

Followed by "05" to "54" or "5.0" to "54.0" denotes the standard rated output voltage designation, with interval of 0.1;

Followed by "-T2" means desktop class II with C8 AC inlet

Followed by "-T2A" means desktop class II with C18 AC inlet

Followed by "-T3" means desktop class I or class II with functional earth with C14 AC inlet

Followed by "-T3A" means desktop class I or class II with functional earth with C6 AC inlet

Followed by "-T2L" means desktop class II with C8 AC inlet and housing with a DC jack

Followed by "-T2AL" means desktop class II with C18 AC inlet and housing with a DC jack

Followed by "-T3L" means desktop class I or class II with functional earth with C14 AC inlet and housing with a DC jack

Followed by "-T3AL" means desktop class I or class II with functional earth with C6 AC inlet and housing with a DC jack

2.0 Product Description	
Model Similarity	<p>Followed by "-R2" means hybrid desktop housing class II with C8 AC inlet</p> <p>Followed by "-R3A" means hybrid desktop housing class I or class II with functional earth with C6 AC inlet</p> <p>Followed by "-TP" means desktop class II with power supply cord with plug</p> <p>Followed by "-TP3" means desktop class I or class II with functional earth with power supply cord with plug</p> <p>Followed by "-TW" means desktop class II with input wire without plug</p> <p>Followed by "-TW3" means desktop class I or class II with functional earth with input wire without plug</p> <p>May be followed by six character which can be "0" to "9", "A" to "Z", "-", "()" or "[]" or blank for marketing purposes and have no bearing on safety or compliance.</p> <p>GT*96600-*56***</p> <p>Followed by "M" or "-" or "H" for market identification and not related to safety.</p> <p>Followed by "01" to "70" denotes the rated output wattage designation, with interval of 1, "01" stands for 1W, "70" stands for 70W.</p> <p>Followed by "56" denotes the standard rated output voltage designation is 56V;</p> <p>Followed by "-T2" means desktop class II with C8 AC inlet</p> <p>Followed by "-T2A" means desktop class II with C18 AC inlet</p> <p>Followed by "-T3" means desktop class I or class II with functional earth with C14 AC inlet</p> <p>Followed by "-T3A" means desktop class I or class II with functional earth with C6 AC inlet</p> <p>Followed by "-AP" (with baby board) stands for Active POE</p> <p>Followed by "-PP" (no baby board) stands for Passive POE</p> <p>Followed by "-SP" (no baby board) stands for Simple POE</p> <p>May be followed by six character which can be "0" to "9", "A" to "Z", "-", "()" or "[]" or blank for marketing purposes and have no bearing on safety or compliance.</p> <p>The GT*91099-***** and GT*96600-***** have same enclosure with smooth surface or groove surface and PCB Layout size, the transformer models TF-series used in GT*96600-***** and models XF-series used in GT*91099-***** have the same primary windings but different with secondary windings and constructions (The TF-series used fly line). Different transformer types are alternative, which are identical in same construction except different routing of secondary lead wires and shield foil.</p>
Ratings	<p>GT*96600-****, GT*91099-*****:</p> <p>Input: 100-240V~, 50-60Hz or 50/60Hz, 1.5A</p> <p>Output: 5-54Vdc, Max. 8.00A, Max. 65W</p> <p>GT*96600-*56***:</p> <p>Input: 100-240V~, 50-60Hz or 50/60Hz, 2.0A;</p> <p>Output: 56VDC, Max. 70W</p> <p>See section 7.0, Illustration 1 for details</p>
Other Ratings	<p>ta:40°C, Altitude:5000m</p>

NOTES:

- 1) Not all item numbers are indicated (called out) in the photos, as their location is obvious.
- 2) "Various" means any type, from any manufacturer that complies with the "Technical data and securement means" and meets the "Mark(s) of conformity" can be used.
- 3) Indicates specific marks to be verified, which assures the agreed level of surveillance for the component. "NR" indicates Unlisted and only visual examination is necessary. "See 5.0" indicates Unlisted components or assemblies to be evaluated periodically refer to section 5.0 for details.

5.0 Critical Unlisted CEC Components
No Unlisted CEC components are used in this report.

6.0 Critical Features

Recognized Component - A component part, which has been previously evaluated by an accredited certification body with restrictions and must be evaluated as part of the basic product considering the restrictions as specified by the Conditions of Acceptability.

Listed Component - A component part, which has been previously Listed or Certified by an accredited Certification Organization with no restrictions and is used in the intended application within its ratings.

Unlisted Component - A part that has not been previously evaluated to the appropriate designated component standard. It may also be a Listed or Recognized component that is being used outside of its evaluated Listing or component recognition.

Critical Features/Components - An essential part, material, subassembly, system, software, or accessory of a product that has a direct bearing on the product's conformance to applicable requirements of the product standard.

Construction Details - For specific construction details, reference should be made to the photographs and descriptions. All dimensions are approximate unless specified as exact or within a tolerance. In addition to the specific construction details described in this Report, the following general requirements also apply.

1. Spacing - In primary circuits, 2.3 mm minimum spacing are maintained through air and 2.4 mm minimum spacing are maintained over surfaces of insulating material between current-carrying parts of opposite polarity and 4.5 mm minimum spacing are maintained through air and 5.0 mm minimum spacing are maintained over surfaces between such current-carrying parts and dead-metal parts or low voltage isolated circuits.
2. Mechanical Assembly - Components such as switches, fuseholders, connectors, wiring terminals and display lamps are mounted and prevented from shifting or rotating by the use of lockwashers, starwashers, or other mounting format that prevents turning of the component.
3. Corrosion Protection - All ferrous metal parts are protected against corrosion by painting, plating or the equivalent.
4. Accessibility of Live Parts - For adapter models, all uninsulated live parts in primary circuitry are housed within a non-metallic enclosure constructed with no openings and metal enclosure earthed with ventilation holes other than those specifically described in Sections 4 and 5.
5. Grounding - For adapter models with earthing connection, all exposed dead-metal parts and all dead-metal parts within the enclosure that are exposed are connected to the grounding lead of the power supply cord and the equipment grounding terminal. For adapter models without earthing connection, the products are not provided with grounding means as they are reinforced insulated.
6. Polarized Connection - This product is provided with a non-polarized power supply connection.
7. Internal Wiring - Internal wiring is routed away from sharp or moving parts. Internal wiring leads terminating in soldered connections are made mechanically secure prior to soldering. Recognized Component separable (quick disconnect) connectors of the positive detent type, closed loop connectors, or other types specifically described in the text of this report are also acceptable as internal wiring terminals. At points where internal wiring passes through metal walls or partitions, the wiring insulation is protected against abrasion or damage by plastic bushings or grommets. All wiring is minimum 24AWG, with a minimum rating of 300V, 80°C.
8. Schematics - Refer to Illustration No(s). 2, 3a to 3c for schematics & PCB layout requiring verification during Field Representative Inspection Audits.
9. Transformer - Supplier records must be provided that indicate the received shipment of transformers model TF058, TF059, TF060, TF061, TF063, TF064, TF072, XF00794, XF00731, XF00694 and XF00695 (section 4.0, item 13) was constructed as indicated in Illustrations 4a to 4e. These records must be available at the factory for inspection on every received shipment.
10. Markings - The product is marked on a labeling system as described in item no. 14 of Section 4.0 or by laser etching into polymeric enclosure as follows: Applicant's name, product name, Model number, Electrical ratings, Manufacturing date, Symbol of class II, See instruction manual for use in countries other than the U.S.A or equivalent.
11. Safety Instructions - Instructions for installation and use of this product are provided by the manufacturer. They are kept in file and need not be repeated here.

8.0 Test Summary					
Evaluation Period	15-Mar-2021 to 22-Jun-2021			Project No.	210301634SHA
Sample Rec. Date	15-Mar-2021	Condition	Prototype	Sample ID.	0210315-31-001~030
Test Location	Building No.86, 1198 Qinzhou Road (North), Shanghai 200233, China				
Test Procedure	Testing Lab				
Determination of the result includes consideration of measurement uncertainty from the test equipment and methods. The product was tested as indicated below with results in conformance to the relevant test criteria.					
The following tests were performed:					
Test Description			Audio/Video, Information And Communication Technology Equipment - Part 1: Safety Requirements [UL 62368-1:2014 Ed.2]		
			Audio/Video, Information and Communication Technology Equipment - Part 1: Safety Requirements (R2019) [CSA C22.2#62368-1:2014 Ed.2]		
Energy source classifications			4.2		
Protection against energy sources			4.3		
Classification and limits of electrical energy sources			5.2		
Classification of power sources (PS) and potential			6.2		
10 N steady force test			4.6.2		
Temperature test for insulating materials and touch temperature			5.4.1.4, 9.0		
Determination of working voltage test			5.4.1.8		
Ball pressure test			5.4.1.10.3		
Clearances and creepage distances measurement			5.4.2, 5.4.3		
Solid insulation measurement			5.4.4		
Humidity conditioning test			5.4.8		
Electric strength test			5.4.9		
Capacitor discharging test			5.5.2.2		
Thermal energy source classifications			9.2		
Input test			B.2.5		
Simulated single fault conditions tes			B.4		
Marking durability test			F.3.10

10.0 General Information

The Applicant and Manufacturer have agreed to produce, test and label ETL Listed products in accordance with the requirements of this Report. The Manufacturer has also agreed to notify Intertek and to request authorization prior to using alternate parts, components or materials.

COMPONENTS

Components used shall be those itemized in this Intertek report covering the product, including any amendments and/or revisions.

LISTING MARK

The ETL Listing mark applied to the products shall either be separable in form, such as labels purchased from Intertek, or on a product nameplate or other media only as specifically authorized by Intertek. Use of the mark is subject to the control of Intertek.

The mark must include the following four items:

- 1) applicable country identifiers "US" and/or "C" or "US", "C" and "EU"
- 2) the word "Listed" or "Classified" or "Recognized Component" (whichever is appropriate)
- 3) a control number issued by Intertek
- 4) a product descriptor that identifies the standards used for certification. Example:

For US standards, the words, "Conforms to" shall appear with the standard number along with the word, "Standard" or "Std." Example: "Conforms to ANSI/UL Std. XX."

For Canadian standards, the words "Certified to CAN/CSA Standard CXX No. XX." shall be used, or abbreviated, "Cert. to CAN/CSA Std. CXX No. XX."

Can be used together when both standards are used.

If all standards on the ATM have the same standard title, the shared title or its abbreviation may be used in place of the examples above. Example: "Medical Electrical Equipment" or "MEE"; "Information Technology Equipment" or "ITE"; "Audio/Video Information And Communication Technology Equipment" or "A/V ICTE".

Note: A facsimile must be submitted to Intertek, Attn: Follow-up Services for approval prior to use.

The facsimile need not have a control number. A control number will be issued **after signed Certification Agreements** have been received by the Follow-up Services office, approval of the facsimile of your proposed Listing Mark, satisfactory completion of the Listing Report, and scheduling of a factory assessment in your facility.

MANUFACTURING AND PRODUCTION TESTS

Manufacturing and Production Tests shall be performed as required in this Report.

FOLLOW-UP SERVICE

Periodic unannounced audits of the manufacturing facility (and any locations authorized to apply the mark) shall be scheduled by Intertek. An audit report shall be issued after each visit. Special attention will be given to the following:

1. Conformance of the manufactured product to the descriptions in this Report.
2. Conformance of the use of the ETL mark with the requirements of this Report and the Certification Agreement.
3. Manufacturing changes.
4. Performance of specified Manufacturing and Production Tests.

In the event that the Intertek representative identifies non-conformance(s) to any provision of this Report, the Applicant shall take one or more of the following actions:

1. Correct the non-conformance.
2. Remove the ETL Mark from non-conforming product.
3. Contact the issuing product safety evaluation center for instructions.

10.1 Evaluation of Unlisted Components

Because Unlisted Components are uncontrolled, and they do not fall under a third party follow up program, Intertek may require these components to be tested and/or evaluated at least once annually, more often for certain components, as part of the independent certification process. The Unlisted Components in Section 5.0 require testing and/or evaluation as indicated.

The Applicant will be notified, in writing, via the applicable contact methods, as defined in Section 1.0, when these components must be selected and sent to Component Evaluation Center (CEC) for re-evaluation.

Due to particular testing requirements, some components may be requested to be shipped to specific labs. Thus, specific shipment destination(s) for each sample will be provided in the written notification.

Managing CEC Location:

Intertek Testing Services Shanghai Limited

ETL Component Evaluation Center

Building No. 86, 1198 Qinzhou Road (North)

Shanghai 200233, China

Attn: Ms. Emiliana Zhou

Sample Disposition: Due to the destructive nature of the testing, all samples will be discarded at the conclusion of testing unless, the manufacturer specifically requests the return of the samples. The request for return must accompany the initial component shipment.

11.0 Manufacturing and Production Tests

The manufacturer agrees to conduct the following Manufacturing and Production Tests as specified:

Required Tests

Dielectric Voltage Withstand Test

11.1 Dielectric Voltage Withstand Test

Method

One hundred percent of production of the products covered by this Report shall be subjected to a routine production line dielectric withstand test.

The test shall be conducted on products, which are fully assembled. Prior to applying the test potential, all switches, contactors, relays, etc., should be closed so that all primary circuits are energized by the test potential. If all primary circuits cannot be tested at one time, then separate applications of the test potential shall be made.

The test voltage specified below shall be applied between primary circuits and accessible dead-metal parts. The test voltage may be gradually increased to the specified value but must be maintained at the specified value for one second or one minute as required.

Test Equipment

The test equipment shall incorporate a transformer with an essentially sinusoidal output, a means to indicate the applied test potential, and an audible and/or visual indicator of dielectric breakdown.

The test equipment shall incorporate a voltmeter in the output circuit to indicate directly the applied test potential if the rated output of the test equipment is less than 500VA.

If the rated output of the test equipment is 500VA or more, the applied test potential may be indicated by either:

- 1 - a voltmeter in the primary circuit;
- 2 - a selector switch marked to indicate the test potential; or
- 3 - a marking in a readily visible location to indicate the test potential for test equipment having a single test potential output.

In cases 2 and 3, the test equipment shall include a lamp or other visual means to indicate that the test potential is present at the test equipment output. All test equipment shall be maintained in current calibration.

Products Requiring Dielectric Voltage Withstand Test:

<u>Product</u>	<u>Test Voltage</u>	<u>Test Time</u>
<u>Product - One sample from each shipment of Section 4.0 item 13:</u>		
Between primary circuit and secondary output	4000Vdc	1 min
Between secondary circuit and core	4000Vdc	1 min
<u>Product - Model TF061 from each shipment of Section 4.0 item 13:</u>		
Between primary circuit and secondary output	4000Vdc	1 min
Between secondary circuit and core	4000Vdc	1 min
<u>Product - Model TF072 from each shipment of Section 4.0 item 13:</u>		
Between primary circuit and secondary output	4000Vdc	1 min
Between secondary circuit and core	4000Vdc	1 min
<u>Product - Model XF00731 from each shipment of Section 4.0 item 13:</u>		
Between primary circuit and secondary output	4000Vdc	1 min
Between secondary circuit and core	4000Vdc	1 min
<u>Product</u>		
All products covered by this Report.		
Between input circuit and accessible enclosure surface	3600Vdc	1 s
Between input circuit and secondary circuit/output terminal	3600Vdc	1 s

The following changes are in compliance with the declaration of Section 8.1:
