(The 1st "*" part can be 'M' or '-' or 'H' for market identification and not related to safety.

The 2nd "*" part denotes the rated output wattage designation, which can be "01" to "18", with interval of 1W.

The 3rd "*" part denotes the standard rated output voltage designation, which can be "12", "18", "24" or

"30". These standard rated output voltage designations correspond to four isolated transformer models. Each transformer model is identical in insulation construction including clearance and creepage except number of turns per coil.

The 4th "*" part is optional, which can be "-0.1" to "-7.0" with interval of 0.1 to denote voltage deviation or blank to indicate no voltage different. The result by subtracting the deviation value from the standard rated output voltage denotes the rated output voltage, with a range of 5 - 30 volts.)
