Model Similarity:

GT*41080-****:
The 1st "*" part can be 'M' or '-' or 'H' for market identification and not related to safety.
The 2nd "*" part denotes the rated output wattage designation, which can be "01" to "18", with interval of 1.
The 3rd "*" part denotes the standard rated output voltage designation, which can be "07", "11", "17.9", "30", "38" and "48". Each standard rated output voltage designation corresponds to a transformer model. Each transformer model is identical in insulation construction including clearance and creepage except number of turns per coil.
The 4th "*" part is optional, which can be "-0.1" to "-12" with interval of 0.1 to denote voltage deviation or blank to indicate no voltage different. The result by subtracting the deviation value from the standard rated output voltage denotes the rated output voltage, with a range of 5 - 48 volts.
The 5th "*" part is also optional, which can be "-F" to denote open frame power supply model series or blank to denote direct plug-in power adapter model series.
Tests were performed on 5Vdc/3A output adapter model and 48Vdc/0.375A output adapter model as worst condition, and also performed on other output models for reference. For open frame model, temperature testing, leakage current test and mechanical strength test shall be performed on this component when installed in the end product.
