Group differences for CENELEC and national differences for Germany, United Kingdom, Australia and United States are considered.

Explanation for models GT*41134***** and GT*96060*****:

The 1st "*" can be "M" or "-" or "H" for market identification and not related to safety.

The 2nd "*" part can be "-" or "CC", "-" = Constant Voltage Model, CC = Constant Current Model.

The 3rd "*" denote the rated output wattage designation, which can be "01" to "06", with interval of 1.

The 4th "*" denotes the standard rated output voltage designation, which can be "03", "04", "06", "12", "15", "18", "24" or "36". These standard rated output voltage designations correspond to seven isolated transformer models (See the appended table 24.1 for details). Each transformer model is identical in insulation construction including clearance and creepage except number of turns per coil.

The 5th "*" is optional deviation, subtracted from standard output voltage, which can be "-0.1" to "-11.9" with interval of 0.1, or blank to indicate no voltage different.

The 4th and 5th "*" together denote the output voltage, with a range of 3.3-36 volts.

The last * denote any six character = 0-9 or A-Z or () [] or - or blank for marketing purposes.
